

Popups & Gallery Controls

How to keep your popup showing, hide the gallery, and hide collections or photos.

1 Make Your Popup Keep Showing

Your popup stopped appearing because it was set to only show once. Here is how to control that.

Each popup has a **How often to show** setting that decides when a returning visitor sees it again:

1. **Every visit** — shows every single time someone loads the page. Best for an always-on announcement.
2. **Once per day** — shows again after 24 hours. A gentle reminder that does not nag.
3. **Once per session** — shows one time, then stays hidden until the visitor closes their browser and comes back.

To set it

1. Go to **Admin → Popups** and click your popup.
2. Find the **How often to show** field.
3. Choose **Every visit** if you want it to always appear.
4. Make sure **Active** is checked, then click **Save**.

Why it disappeared before: the popup was remembering that a visitor had already seen it and never showed again. That has been fixed — "Once per session" now correctly resets when someone reopens their browser, and "Every visit" always shows.

2 Hide the Gallery

You can now hide the photo gallery on your Home page and your Gallery page independently.

1. Go to **Admin → Site Settings**.
2. Click the **Display** tab at the top.
3. You will see two checkboxes:
 - **Show gallery section on Home page** — uncheck to remove the gallery block from your homepage.
 - **Show photo gallery on Gallery page** — uncheck to remove the photo grid from your Gallery page. Your Instagram feed and private client login still show.
4. Uncheck whichever you want to hide, then click **Save**.
5. Your website updates right away.

Tip: to bring a gallery back, return to the Display tab and re-check the box. Nothing is deleted — it is only hidden.

3 Hide a Collection or Single Photo

Hide any individual photo, or hide a whole collection, without deleting anything.

Hide one photo

1. Go to **Admin → Gallery Images** and click the photo.
2. Check the **Hidden** box near the bottom.
3. Click **Save**. That photo disappears from the public gallery.

Hide a whole collection

A collection is just all the photos that share the same **Collection Name**. To hide the collection, hide each photo in it:

1. Go to **Admin → Gallery Images**.
2. Open each photo that has that Collection Name.
3. Check **Hidden** and click **Save** on each one.
4. Once every photo is hidden, the collection tab no longer appears on your Gallery page.

To show it again: open the photo(s), uncheck **Hidden**, and Save. Hidden only affects the public website — your password-protected and private client galleries are unaffected.
